FLEURIER

PARMIGIANI FLEURIER

TIME IS FLYING

“At Parmigiani Fleurier, we aspire to create superbly elegant timepieces that appeal to purists of tomorrow seeking personal hedonistic pleasure. A savvy cultural elite in watchmaking who appreciates heritage, superior craft and has a strong sense of style and refinement.”

— Guido Terreni, CEO Parmigiani Fleurier

IMMERSION INTO THE HEART OF PURISM

Parmigiani Fleurier is rewriting watchmaking in its two-pronged quest for purism and innovation. In contrast with the mainstream, Parmigiani Fleurier speaks the language of rarity, meaning, form and content, traits shared by all the models.

Through World Premieres, a celebration of platinum and exceptional calendars, Parmigiani Fleurier is breaking new ground, yet remains faithful to the founding spirit of the company and its fundamental hallmarks of purity, discretion, and minimalist sophistication, all driven by the desire to innovate in order to make watches lifelong companions.

Enthusiasts are invited to embark on an initiatory journey, one that began in 2021 and which places the demand for purity at the core of the creative process with one sole objective: horological complications revisited to become life companions.

TONDA *PF* MICRO-ROTOR

The foundations of the collection were laid with the introduction of Tonda PF Micro-Rotor. Purity, refined minimalism and discretion have come to characterise the entire Tonda PF collection since its launch in September 2021. The subsequent models launched by Parmigiani Fleurier have all been born of this original matrix that established the brand's watchmaking codes and fundamentals.

The Tonda PF Micro-Rotor measures 40 mm in diameter and owes its pure aesthetic to its warm grey, matte guilloché dial. A new version of Parmigiani Fleurier's fundamental movement, the self-winding PF703, beats inside; this ultra-slim, 3-mm-thick engine incorporates a full platinum micro-rotor, integrated inside the movement's structure rather than on top. The slimmer caliber ensures that the Tonda PF Micro-Rotor stands a mere 7.8 mm high on the wrist, ensuring comfort and elegance.

In a rare and exclusive combination, it features hours, minutes and date. The date disc is the exact same color as the minute track, establishing a consistent colorway. Combined with its slimmness and sleekness, this makes the Tonda PF Micro-Rotor a refined everyday timepiece for literally any occasion.

TONDA *PF* MICRO-ROTOR

TONDA *PF* MICRO-ROTOR ALLIGATOR

With its meticulous array of details, patterns, shapes, and curves, the Tonda PF demonstrates a highly honed sense of savoir-faire in both technical complication and aesthetic refinement. Its 18ct rose gold case is now mounted on a brown alligator leather strap that harmonizes with the grey color of the dial, adorned with a Grain d'Orge guilloché pattern. The Tonda PF Micro-Rotor adheres to one simple rule: only the essential can be revealed.

This motto underpins the model's renewed identity, speaking to its ability to show a radically different face to the world while maintaining the fundamental values and attributes that make the model so special. This timepiece is designed and envisioned to provide an intimate and personal experience for its wearer, and only its wearer.

The Tonda PF Micro-Rotor radiates an imperceptible refinement, as embodied in its in-house movement, the ultra-thin, 3mm Caliber PF703, with automatic winding powered by a platinum micro-rotor. The combination of colors chosen for the dial and the alligator leather strap testify to the brand's taste for contemporary classicism. Identical in every important aspect to the Tonda PF launched in September 2021, and yet undeniably different and individualistic in substantial ways, the new model is rich in its minimalism and definitive in its emblematic luxury.

TONDA *PF* MICRO-ROTOR PLATINUM

THE MATRIX IN PRECIOUS WHITE

After steel with a platinum bezel, and after 18ct rose gold, the iconic Tonda PF Micro-Rotor is evolving into an all-platinum case, bracelet and dial version. The watch is driven by its ultra-thin 3mm self-winding movement with platinum micro-rotor, Calibre PF703.

This small oscillating weight is integrated into the thickness of the movement, unlike a classic half-moon-shaped rotor that would have covered it. This enables a significant reduction of thickness, meaning the Tonda PF Micro-Rotor measures only 7.8 mm on the wrist, synonymous with comfort, refinement and elegance. Most of the overall finishing is done by hand, both for the movement and for the case elements. While Parmigiani Fleurier watches are contemporary and modern, they all obey the intangible rules of top-flight watchmaking craftsmanship.

The displays of the Tonda PF Micro-Rotor are entirely focused on essentials – hours, minutes and date – reflecting the aesthetic spirit that guided its creation. This pure and understated model reinterprets the tenets of watchmaking classicism in a very contemporary and noble perspective. With its 40 mm diameter and a pared-down, sandblasted platinum dial, the Tonda PF Micro-Rotor is capable of multiple transformations in accordance with various metals and colours, while at the same time asserting its undeniable sovereignty.

TONDA *PF*

AUTOMATIC

DO SMALL, THINK BIG, 36 MM

36

TONDA *PF* AUTOMATIC 36MM

Slightly reduced in size, retaining the emblematic wide dial opening, and hosting a new in-house automatic movement, the Tonda PF Automatic 36mm is the brand's affirmative response to the many requests for a version of this timepiece in a format adapted to a slenderer wrist. It also speaks to the growing demand for smaller sizes and the "vintage" flavour they evoke.

The Tonda PF Automatic is the purest embodiment of the brand's spirit. Its assertive identity is expressed through complementary values of design discretion, a wide dial opening, subtle chromatic variations, and uncompromising finishes. All these values persist in the new Tonda PF Automatic, reinvented today with a diameter of 36mm.

The latest generation of the Tonda PF Automatic proudly upholds the stylistic codes that Parmigiani Fleurier so deftly established for its predecessor: fluid and harmonious integration of the case and bracelet in 18ct rose gold or steel, knurled bezel, and finely guilloché minimalist dials with baguette-cut diamond hour markers set invisibly. Three new colour variations debut to mark the transition to this new format: Silver Sand and Warm Grey for the steel versions with a platinum bezel and Deep Ruby for the full 18ct rose-gold version: sobriety and discreet elegance in line with the chromatic palette favoured by Parmigiani Fleurier.

The three new Tonda PF Automatics beat to the rhythm of Caliber PF770. In accordance with the standards enforced at Parmigiani Fleurier, this new movement, developed to fit into the new 36mm case and endowed with a 60-hour power reserve, meets the highest finishing requirements, including bevelled steel and decorated surfaces. The 22ct rose gold, skeletonized oscillating weight is adorned with the PF logo, floating in the centre of a sapphire plate.

TONDA PF AUTOMATIC 36MM

Far beyond offering a simple reduction in diameter, the Tonda PF Automatic 36mm broadens the scope of the collection while remaining perfectly in harmony with its DNA, which transcends the traditional categorization of timepiece genres.

TONDA *PF*

CHRONOGRAPH

TAILORED PERFORMANCE

46

TONDA *PF* CHRONOGRAPH

The Tonda PF Chronograph combines a popular high complication with a design architecture of understated elegance, an exercise in style that is very challenging. The model is a precision machine: Its integrated manufacture Caliber PF070 beats at a high frequency, 5 Hz; incorporates a column wheel; and displays the classic indications of small seconds, minutes and hours. The back of the watch reveals the movement and its openworked oscillating weight in 22ct rose gold, adorned with the floating PF logo.

Controlled volumes and proportions:

Arranged on the surface of the new Milan Blue dial, with its signature Grain d'Orge guilloché pattern, are the three subdial counters whose railroad-style borders have a fine, smoothly sandblasted circular finish; the deeper blue of these framed subdials helps facilitate the reading of elapsed times. A technical and sporty piece par excellence, the Tonda PF chronograph retains a refined elegance thanks to the masterful volumes and proportions in its integrated overall aesthetic.

The pushers serve as a natural extension of the horns, which flow naturally into the Milano Blue alligator leather strap for an elegant extension of the rose gold case. The Tonda PF Chronograph: elegant eveningwear for a sporty timepiece.

TONDA PF

MINUTE RATTRAPANTE

Innovation in terms of complications, paired with simplicity of use: true to the spirit of the brand.

Parmigiani Fleurier presents the Tonda PF Minute Rattrapante, a new world premiere following on from the Tonda PF GMT Rattrapante. The Tonda PF GMT Rattrapante caused a sensation in 2022 as a world premiere reinterpreting the meaning of horological “complication” by propelling it towards intuitive innovation. Parmigiani Fleurier is naturally pursuing this theme by presenting a new world premiere: the Tonda PF Minute Rattrapante. Its birth was guided by the idea of reinterpreting one of the most common watchmaking functions while helping it evolve to become an absolute innovation. The basic premise: to perform the function usually operated by the graduated bezel on a diver’s watch via the movement itself. The result: user friendliness, excellent legibility and apparent simplicity right the way through to activating the function.

While Tonda PF GMT Rattrapante enables a distinction between local and home time in one-hour increments, this new development of the function now serves to display the minutes in five and one-minute increments respectively.

The dial features an hour hand along with two superimposed minute hands – of which the premiere in rhodium-plated gold indicates real time coupled with the hour hand. It conceals the other hand in 18ct rose gold, which will calculate minutes in five or one-minute increments on demand. In both cases, pressing on either pusher will make the rose gold hand jump according to the desired increment: five minutes by the pusher located at 8 o’clock, one minute by the one positioned at 10 o’clock. The period of time to be measured will have elapsed when the rhodium-plated hand has reached the position of the 18ct rose gold hand. It is returned to its position by means of the crown-integrated pusher, in a similar way to the split-seconds function.

The function enables on-demand fine calibration of the minutes over a specific period of time for any occasion or event requiring measurement of the minutes count.

The contrast is striking. This is very much a complication, yet in the Parmigiani Fleurier spirit. The Tonda PF Minute Rattrapante is graced with pure and essential proportions featuring sophisticated aesthetic codes and finishes.

A complication that is intuitive, efficient and extremely simple to use, in harmony with the spirit that guides the brand. Just as a tailor crafts the folds formed by the drape of a fabric, the Manufacture structures the silhouette of the Tonda PF Minute Rattrapante, a watch distinguished by great formal simplicity designed to become as one with the aesthetes that make it their own.

TONDA *PF*

GMT RATTRAPANTE

WORLD PREMIERE

72

TONDA *PF* GMT RATTRAPANTE

One of the most remarkable launches in 2022, the Tonda PF GMT Rattrapante, world premiere, renewed the genre of the horological complication by combining purity and minimalism with a resolutely innovative mechanism. This iconic timepiece returns in 2023 in an integral 18ct rose gold version, graced with a Milano blue dial featuring a finely barleycorn guilloché pattern.

The Tonda PF GMT Rattrapante appears totally unassuming at first glance, with hours and minutes sweeping gracefully around the broad dial. Yet beneath this traditional watch face lies a complication powering two superimposed hours hands, one in rhodium-plated gold and the other in rose gold. Pressing the 8 o'clock pusher makes the 18ct rose gold hand dedicated to local time perform a one-hour jump, revealing the rhodium-plated gold hand displaying home time. Once the dual-time information is no longer required, pressing the crown-integrated pusher enables the 18ct rose gold hand to resume its place above the rhodium-plated gold hand in the manner of a chronograph split-seconds hand.

The Tonda PF GMT Rattrapante is a perfect instrument for globetrotters juggling time zones. There is nothing superfluous on this sleek and elegant model indicating only the hours—in home-time and local-time mode—and minutes.

Instinctive reading

This original mode of operation, unique in watchmaking history, was achieved through the integration of a sophisticated and innovative mechanism. The implementation of this intuitive complication enables purists the luxury of choosing to free the dial surface from any time display that is unnecessary at that particular moment. This action reduces the amount of information to bare essentials, promotes instinctive reading and helps reveal the quality and care lavished on each detail.

TONDA *PF* GMT RATTRAPANTE

“In watchmaking there is a permanent tension between aesthetic and technique, as if these are two separate worlds that must coexist. This is even reflected in the word used to describe the components conveying the design of a timepiece, the watch exterior elements collectively referred to in French as “habillage”, meaning “that which attires the movement”. To me, the way you develop a complication has incredible implications on the mood of the watch and hence on its design. The world-first Tonda PF GMT Rattrapante pushes the boundaries of watchmaking, reinventing one of the most coveted and useful functions and embodying Parmigiani Fleurier’s discreet, unostentatious spirit through uncompromising technical choices.”

CULTURAL CALENDARS

MIRRORS OF CIVILIZATIONS

TONDA *PF* GREGORIAN CALENDAR

TONDA *PF* XIALI CALENDAR

TONDA *PF*

GREGORIAN CALENDAR

THE RETROGRADE DATE

90

TONDA *PF* GREGORIAN CALENDAR

Man has long sought to master the course of time and solve its mysteries. The measurement of time is as old as the cultures and civilizations that have shaped human history, and the highest levels of watchmaking have been devoted to this quest. Parmigiani Fleurier demonstrated its own expertise in this ancient craft with the Tonda PF Annual Calendar, now outfitted with a brown alligator leather strap to accessorize with the deep gray dial — a subtle chromatic combination for a watch that is just as elegant in its 18ct rose gold iteration.

The sophisticated mechanism inside the Tonda PF Annual Calendar must deliver a plethora of complex information while always meeting the requirements of clarity and readability that are traditionally imposed on an Annual Calendar. The devil is in the details: the balanced layout of the Grain d'Orge guilloché dial embodies subtlety of design while also demonstrating a clear devotion to legibility of its various displays.

Champion of Time Mastery

The 42mm case houses one of the most poetic complications in Haute Horlogerie. The Caliber PF339 displays a retrograde date, day, and month, along with a moon-phase with a precision of 122 years in both hemispheres. These functions complement the traditional indication of the hours, minutes, and seconds, comprising an amalgam of temporal, astronomical and calendar information that nevertheless adheres to the aesthetic purity that Parmigiani Fleurier has demanded for this champion of the mastery of time.

TONDA *PF* XIALI CALENDAR

Parmigiani Fleurier presents the new Tonda PF Xiali Calendar – a World Premiere with a Chinese complete calendar.

More than just a calendar, Xiali is an ode to the calendars and civilizations of the world through the Swiss mechanical art so dear to Parmigiani Fleurier since its founding. With all the poetry and culture it represents, Xiali takes its name from the translation of “Chinese Traditional Complete Calendar.”

Throughout history, man has sought to control time, to predict and chart its flow, in order to better organize the rhythm of social, religious and agricultural life. The calendar, which is universal, allows us to identify dates that are inscribed like milestones in the flow of time. Parmigiani Fleurier has long been fascinated by this cultural phenomenon and presents the Tonda PF Xiali Calendar, an extremely complex creation that follows up other special editions devoted to re-creating the Gregorian and Muslim Calendars and which is the third to have been developed by Parmigiani Fleurier in one of its unparalleled areas of expertise.

The calendar functions are among the most fascinating, mirroring civilizations and societies, receptacles of belief, and indefinable phenomena such as the movement of shadows, alternation of seasons, and the mysteries of the lunar cycle. Together, such phenomena play a vital role in human activity.

TONDA *PF* XIALI CALENDAR

WATCH INDICATIONS

- Indication of the day number of the month (1 to 29 or 1 to 30 depending on the length of the month) in the counter at 3 o'clock.
- Indication of the length of the current month (via aperture at 3 o'clock).
- Moon phase indication (synchronised with day number) via counter at 6 o'clock.
- Indication of the month number (1 to 12) in the counter at 9 o'clock.
- Indication of leap month via aperture at 9 o'clock.
- Indication of the name of the year / animal and corresponding element in the counter at 12 o'clock.
- Full Chinese calendar ; the most precise and complete.
- An extremely complex and sophisticated mechanism calculating and synchronizing lunar and solar indications.
- All information displayed on the dial without exception: they remain accurate without intervention as long as the watch does not stop.
- Adjustments can be made quickly thanks to the correctors located on the case middle.
- It is mechanically programmed to cover a twelve-year period through a cam system.
- The watch must be reset for an equivalent period at the end of the twelve years.

SKELETON

ARTISTIC OPENWORKING

TONDA *PF* SKELETON

The art of skeletonization in watchmaking is generally a process by which an existing movement is opened up, with pieces carved out to reveal only the most essential components as a visual treat for the connoisseur's eye. For the two new Tonda PF Skeleton models — one in 18ct rose gold and one in stainless steel and platinum — Parmigiani Fleurier took a different approach, one that reflects its core values of purity and restraint with an uncompromising eye for detail. The new PF777 caliber was designed to reveal its organic life while preserving its balance and volume. Its artistic openworking has been carefully executed to make the best of both solid parts and open voids, allowing light to pour into the heart of the self-winding movement, comprised of 187 parts, and illuminate its meticulously hand-chamfered latticework.

Visible through the transparent caseback, the oscillating weight is crafted in 22ct rose gold and blends in fully with the movement's airy overall structure. Also openworked is the barrel, whose structure allows for the steady contracting and relaxing of the mainspring, which drives the balance at 28,800 vibrations per hour, to be viewed.

The 40mm case and graphite-colored, openworked dial also display the uncompromising aesthetic and chromatic codes of the brand, with alternating sandblasted and satin-brushed surfaces and suspended hour markers. Two openworked hands glide over the large dial opening, which retains only a chapter ring to facilitate the reading of the time. The knurled, polished bezel catches light beautifully and the supple, smooth-flowing bracelet adds contemporary appeal.

FLYING TOURBILLON

DISCRETION AT ITS FINEST

132

TONDA *PF* FLYING TOURBILLON

Platinum rules once again, in a version combining the precious metal with one of the supreme Haute Horlogerie complications: the Tourbillon. Following on from the 25-piece limited edition presented in 2022, this year's Tonda PF Tourbillon features a special characteristic: its platinum dial appears in a Milano blue shade that is a favourite with Parmigiani Fleurier. The choice of colours highlights the generous opening at 7 o'clock, providing a chance to admire the magic of the perpetual moving regulating organ.

This new interpretation remains true to the brand spirit, magnificently expressing the stylistic vision of the Maison and its approach distinguished by discreet yet strong added value. Tonda PF Tourbillon embodies perfect purity.

Concealed beneath the Milano blue dial, the calibre developed within the Watchmaking Centre – a flying tourbillon movement with automatic winding via a platinum micro-rotor – reveals some of its 207 components through the transparent case back. Designed, produced and assembled by the artisans of the Watchmaking Centre, this 32.6 mm-diameter Reference PF517 movement is accurate, lastingly reliable and finished to the highest fine watchmaking standards (beveling, circular-graining, *Côtes de Genève*) and measures a mere 3.4 mm thick.

The Tonda PF Flying Tourbillon belongs to the exclusive circle of iconic timepieces, a stature accentuated by its finely knurled and polished platinum bezel.

TONDA *PF*
SPLIT SECONDS
CHRONOGRAPH
A WORLD CLASS
MASTERPIECE

TONDA PF SPLIT SECONDS CHRONOGRAPH

An absolute immersion in rose gold that conceals a world class masterpiece caliber, but in a resolutely Haute Horlogerie iteration. Dedicated to short-time measurement, manual winding Tonda PF Chronograph Rattrapante, with its two column-wheels belongs in the category of exceptional watchmaking instruments and is powered by a movement beating at a rate of 5 Hz or 36,000 Vph. This reinterpretation comes with an entirely 18ct rose gold case and bracelet, delivered with an additional alligator leather strap secured by a pin buckle. This model allows the wearer to admire the 18ct rose gold movement with a barrel featuring the signature of Michel Parmigiani, who created it to mark his brand's 20th anniversary.

Split-seconds chronographs represent the best of this complication category. Designed to measure intermediate (split) times, they are equipped with two superimposed chronograph hands. Activating the 1 o'clock pusher makes the two hands turn together. Pressing the 4 o'clock pusher stops the upper hand while the lower hand continues running. Another press at 4 o'clock brings the upper hand back to the second one in a move that has led to the French term "rattrapante" ("catch-up") for this function. The split time is measured at the first stop. This highly sophisticated function is one of the most difficult complications to create, on a par with a tourbillon or a minute repeater.

The Tonda PF Chronograph Rattrapante is all about performance. Its integrated Manufacture movement includes all the indispensable attributes of a sophisticated mechanism. A high 5 Hz frequency, along with two column-wheels each playing different roles: one dedicated to the chronograph and the other to operating the split-seconds function via the crown-integrated pusher. The Calibre PF361 naturally incorporates a vertical clutch and the balance is held in place by a cross-through bridge in 18ct rose gold—a material featured on the entire structure (baseplate and bridges) holding the moving parts.

The movement of the Tonda Split Second Chronograph is a "racing machine" with 309 components, 35 jewels and a 65-hour power reserve. This timepiece single-handedly symbolises the expertise of an integrated Manufacture. In addition to the chronograph measurement, the dial displays tachymeter and pulsometer scales, while the split-seconds hands adopt different colours, as do the counters appearing slightly above the crown axis.

The tenth-of-a-second precision and the challenge of shaping the gold that is such a malleable material are assets that every devotee of fine watchmaking will appreciate. The construction is designed to ensure the movement's longevity and enable it to withstand shocks. The decorations adorning the movement components meets the standards of Haute Horlogerie, which are those of Parmigiani Fleurier. This creation displays all the aesthetic elements of the Tonda PF collection. The case and bracelet are integrated into a fluid overall design ensuring excellent readability of the chronograph on the date-free dial framed by the brand's signature knurled bezel.

TONDA *PF SPORT* CHRONOGRAPH

Parmigiani Fleurier speaks a distinctive language, and the new Tonda PF Sport is no exception. While it claims its lineage to the PF collection, this collection was designed as its active counterpart, aligned with the spirit of the Maison. Effortlessly elegant, the Tonda PF Sport is a sportive hedonist, tailored for moments of pleasure far from competition and pure performance.

Parmigiani Fleurier watches speak a language of discreet luxury and natural elegance. The new Tonda PF Sport watches are no exception to this rule, which is a virtue at Parmigiani Fleurier. From GT to Sport, this collection affirms its modernized identity with small touches that underline its vocation as a casual sport watch.

The knurled bezel, comprising 160 incisions (versus 225 for the regular Tonda PF collection), and the Cordura-treated rubber strap, which is handcrafted and stitched, are its signature. Like every watch, whose components are all manufactured in the Maison's workshops, handcraft always prevails over machine at Parmigiani Fleurier.

The two Tonda PF Sport versions in 18ct rose gold or steel - Automatic and Chronograph - still show a few subtle details that distinguish them from the regular Tonda PF collection. The dial's guilloché pattern is of the "triangular nail" type, an artisanal and ancient decorative technique whose raised motif enhances light effects. The large date display is replaced by a more discreet one, and the PF logo is positioned at 12 o'clock. The overall aesthetics have been reworked, with index markers featuring black Superluminova. The textured strap anchoring to the case is fluid, forming a single piece.

In the end, the result is a characterful watch that remains faithful to the refinement of the PF collection and a timepiece that transcends the daily routine for some active outdoor escapes during the weekend. This sporty watch in spirit makes no compromises in its technical contents. It is hedonistic, but at a very high level, playing in the elite category.

The Chronograph version is equipped with an integrated high-frequency (5Hz) manufacture movement with a vertical clutch. It offers a power reserve of 65 hours and is COSC certified (Swiss Official Chronometer Testing Institute). Information readability is optimal thanks to its "panda" configuration - black sub-dials on a light dial. The Tonda PF Sport Automatic also features a manufacture movement with a double barrel, providing a power reserve of 60 hours. In both cases, the timepiece will not require winding during a sailing trip or extended moments of escapism.

Tonda PF Sport speaks to aesthetes for whom sports practice is more about leisure time, the taste of freedom, and luxury escapism in a contemporary world that is about personal pleasure. For tomorrow's purists.

168 The Tonda PF Sport Automatic is equipped with the PF770 automatic winding manufacture movement. It is series-mounted with a double-barrel delivering a power reserve of 60 hours. This heart meets the highest finishing requirements including bevelled edges and Côtes de Genève decorated surfaces. Its oscillating weight is in 22ct rose gold, skeletonized and sand-blasted.

Encased in the **TONDA PF SPORT AUTOMATIC**

The pace of the Tonda PF Sport Chronograph is given by the PF070 caliber, COSC certified automatic manufacture movement. Integrated chronograph construction with a column wheel, high-beat frequency with 36'000Vph (5Hz) offering a 65 hours power reserve. The skeletonized oscillating weight in 22ct rose gold tops the satin-finished open worked bridges, hand-bevelled edges.

Encased in the **TONDA PF SPORT CHRONOGRAPH**

The new Tonda PF Automatics beat to the rhythm of Calibre PF770. In accordance with the standards enforced at Parmigiani Fleurier, this new movement, developed to fit into the new 36mm case and endowed with a 60-hour power reserve, meets the highest finishing requirements, including bevelled steel and decorated surfaces.

Encased in the **TONDA PF AUTOMATIC 36MM**,

169 The Tonda PF Micro-Rotor measures 40 mm in diameter and owes its pure aesthetic to the uncluttered warm grey, matte guilloché dial. It inaugurates a new version of Parmigiani Fleurier's fundamental movement, the PF703. This ultra-slim, 3 mm thick engine is selfwinding thanks to a full platinum micro-rotor. This diminutive oscillating weight is integrated inside the movement's structure rather than lying on top of it. The gain in height is considerable. This in turn allows the Tonda PF Micro-Rotor to measure a mere 7.8 mm on the wrist, ensuring comfort and elegance.

Encased in the **TONDA PF MICRO-ROTOR**

170 The Tonda PF GMT Rattrapante measures 40mm in diameter. This slim 4.9 mm thick automatic mechanism thanks to its 22ct rose gold micro-rotor integrates a patented complication which is a World Premiere: the split GMT function operated through a pusher integrated to the case at 8 o'clock and displaying both times thanks to the two hands displaying simultaneously local and home time. The Rattrapante push-button integrated on the crown allows to reset instantly the two hands on the home time position. Tonda PF GMT Rattrapante boasts a Milano Blue guilloché dial surrounded by a knurled platinum bezel, signatures of the brand.

Encased in the **TONDA PF** GMT RATTRAPANTE

The 42 mm Tonda PF Chronograph exemplifies how a particular design can shift according to the specific requirements of a complication. The 5 Hz Caliber PF070 is an integrated, high frequency, column wheel movement with small seconds and two registers. Integrating three counters on the Tonda PF Chronograph's thinly guilloché dial demands finesse.

Encased in the **TONDA PF** CHRONOGRAPH,

The 42 mm Tonda PF Annual Calendar transcends the aesthetics that had thus far been associated with Parmigiani Fleurier's annual calendar movement. Caliber PF339 presents a retrograde date, day, month and 122-year moonphase as visible in both hemispheres. As they come on top of the three usual time-telling hands, the very nature of the general design of the collection was at stake.

Encased in the **TONDA PF** GREGORIAN CALENDAR

171 The 42mm Tonda PF Xiali Chinese Calendar is the first complete chinese calendar. It combines lunar and solar calendars, calculated separately and then synchronized. As the Chinese calendar is not cyclical the complication, Caliber PF008, is mechanically programmed to cover a twelve years period by means of a cam system. At the end of these twelve years, the watch must be reset for a new equivalent period. During this period, all information is provided without any need for intervention, as long as the watch does not stop. If the watch does stop, corrections are made simply by correcting the day and month number, with a rapid corrector where necessary to facilitate corrections of long periods.

Encased in the **TONDA PF** XIALI CHINESE CALENDAR

172 Skeletonization generally consists of opening up the movement as much as possible in order to offer the eye a visual perspective through which to gaze. Parmigiani Fleurier takes a different approach: the artistic openworking of the Tonda PF Skeleton must reveal the organic life of the movement and its architecture while preserving its balance and volume.

Encased in the **TONDA PF SKELETON**

Designed, produced and assembled by the artisans of the Parmigiani Fleurier watchmaking division, this 32 mm diameter PF517 movement – accurate, durable and finished to the highest Haute Horlogerie standards (beveling, circular graining and *Côtes de Genève*) – gives life to a timepiece that is accomplished in every respect.

Encased in the **TONDA PF FLYING TOURBILLON**

This automatic winding manufacture movement, Caliber PF052, flaunts the split-seconds minute function. It is a world première, the second following the GMT Rattrapante launched in 2022. Equipped with a solid rose gold 22cts micro-rotor, the Tonda PF Minute Rattrapante movement displays 2 minute hands: the first one paired to the hours rhodium hand meanwhile the split-minute hand in 18ct rose gold. Two pushers located on the middle case allow to move the golden hand by 5 minutes and 1 minute increments.

Encased in the **TONDA PF MINUTE RATRAPANTE**

173 Caliber PF361 is a new version of the manufacture's most high-end caliber, the GPHG-awarded Chronor. Three characteristics make this movement a truly exceptional creation. One, its mainplate and bridges are made of solid 18ct rose gold. Two, they're extensively openworked, satin-finished and bevelled, even though the dial is a closed one. Three, it is an integrated, high frequency split-seconds chronograph. It allows optimal timekeeping of two events starting at the same time, down to a 10th of a second.

Encased in the **TONDA PF SPLIT-SECONDS CHRONOGRAPH**

“Restoration is my time of knowledge.
It gave me the confidence and inspiration
to pursue my watchmaking dreams.”

TORIC QUANTIÈME PERPÉTUEL RÉTROGRADE

TORIC QUALITÉ FLEURIER
TORIC TOURBILLON

TORIC

SINCE THE BRAND FOUNDATION

TORIC

The Toric Hémisphères Rétrograde is the ultimate traveller's timepiece. With its two time zones, it allows any two locations to be paired, and correct to the nearest minute. It even allows those locations with a half-hour or quarter-hour difference to be paired with full hour times set from the Greenwich meridian. Featuring a knurled bezel, the signature Toric case was the first creation designed by Michel Parmigiani in 1996.

It was a restored piece that inspired Parmigiani Fleurier to add the GMT complication to its collection. Parmigiani Fleurier's restoration workshops had been entrusted with a pocket watch containing two movements inside one case, each responsible for its own time zone. This sparked a desire to create a timepiece that incorporated the same accuracy of display in the reduced space of a wristwatch case, with a single caliber controlling two time zones, each accurate to the nearest minute. The Tonda Hémisphères released in 2010 was a world first, and in 2017 the brand extended this exceptional movement to the Toric collection.

The Toric Hémisphères Rétrograde uses a module indexed to the main movement to govern the second time zone. By pulling out the small crown at 2 o'clock, the module is disengaged from the movement, meaning it can be adjusted independently of the second time zone, to the nearest minute. When the crown is pressed back in, the movement and module re-engage and the second time zone is re-indexed to the first so that they operate simultaneously. The main crown at 9 o'clock winds the movement and sets the time in the paired time zones. Each of the time zones is associated with a window, which provides the day/night indication so that the time of day can be read instantly for each time zone.

The self-winding Caliber PF 317 also features an instant retrograde calendar, indicated by the third central hand. As it moves towards the last days of the month, the hand activates a spring that drives it back to number 1 with great force, so quickly that it can't be seen with the naked eye. The movement's double series-mounted barrel improves isochronism and rate regularity and offers a power reserve of 50 hours.

The Toric Hémisphères Rétrograde features a rose gold case and a grained white dial. The movement is entirely decorated with *Côtes de Genève*, circular-grained to the highest standards, and incorporates an 18ct rose gold guilloché rotor. The Toric Hémisphères Rétrograde was awarded the Travel Time Watch Prize at the GPHG in 2017.

Hours, minutes, small second, retrograde date, day/night, second time zone

DIAL SPECIFICATIONS

Color: Slate
Finishing: *Grain de Riz* guilloché
Indexes: 18ct rose-plated
Hands: Javelin-shaped with luminescent coating

STRAP

Hermès Havana alligator strap
Closure: 18ct rose gold folding clasp

Rose gold slate

PFC493-1000200-HA1242

MOVEMENT SPECIFICATIONS

Caliber: PF317 – AUTOMATIC WINDING

MOVEMENT

Power reserve: 50 hours
Frequency: 28'800 Vph (4 Hz)
Jewels: 28
No. of components: 316
Diameter: Ø 35.6 mm
Thickness: 5.4 mm
Decoration: *Côtes de Genève*
bevelled bridges

DIAL SPECIFICATIONS

Color: White
Finishing: White grained
Indexes: 18ct rose gold-plated
Hands: Javelin-shaped with luminescent coating

STRAP

Hermès Black alligator strap
Closure: 18ct rose gold folding clasp

Rose gold grained white

PFC493-1002400-HA1442

CASE SPECIFICATIONS

Polished stainless Steel
Diameter: Ø 42.8 mm
Thickness: 11.9 mm
Crown: Ø 5.5 and 6 mm
Glass: anti-reflective sapphire
Case back: sapphire
Engraving on case back: serial number and « HÉMISPHERÈRES RÉTROGRADE »
Water resistance: 30 meters

TORIC QUALITÉ FLEURIER

The Toric Qualité Fleurier comes with a promise: that of unrivalled craftsmanship and timekeeping performance. Established by Michel Parmigiani in 2004, Fleurier Quality certification has become the most demanding certification in the watchmaking world, and represents a brand of unquestionable prestige for the Toric – the first watch ever created by Parmigiani Fleurier.

DIAL SPECIFICATIONS

Color: Silver

TORIC QUANTIÈME PERPÉTUEL RÉTROGRADE

Parmigiani Fleurier has taken one of the very finest complications – the perpetual calendar – and placed it at the heart of its most classic, timeless watch: the Toric. With a precision moon phase and retrograde perpetual date, this watch is the most complex and accomplished of calendar timepieces.

DIAL SPECIFICATIONS

Color: White, blue aventurine moon phase
Finishing: Grained
Indexes: 18ct rose gold
Hands: Javelin-shaped with luminescent coating

STRAP

Hermès Havana alligator strap
Closure: 18ct red gold pin buckle

Red gold grained white
PFH427-1602400-HA1241

CASE SPECIFICATIONS

Polished 18ct red gold
Diameter: Ø 42.5 mm
Thickness: 12.1 mm
Crown: Ø 6 mm set with blue sapphire cabochon 0.21 ct
Glass: anti-reflective sapphire
Case back: sapphire
Engraving on case back: serial number and «QUANTIÈME PERPÉTUEL RÉTROGRADE»
Water resistance: 30 meters

DIAL SPECIFICATIONS

Closure: 18ct red gold pin buckle

Red gold slate
PFH479-1600200-HA1241

194 The Caliber PF317 with automatic winding allows for two time indications to be read, which can be independently adjusted down to the minute. Each time zone is associated with a day-night display. It is also fitted with an instant retrograde date indicated by the third central hand. Its two series-coupled barrels ensure 50 hours of autonomous and exceptionally regular operation. Its pendulum beats at a frequency of 28,800 vibrations per hour. Comprised of 316 components, this sophisticated caliber is decorated according to the highest Haute Horlogerie standards, with superbly angled, beaded and Côtes-de-Genève-decorated bridges and plate. Its oscillating weight is of 22 carat gold that is delicately engraved and stamped with the initials PF.

Encased in the **TORIC HÉMISPHERE RÉTROGRADE**

The Toric Qualité Fleurier is equipped with the PF331 automatic movement with a power reserve of 55 hours. The unique feature of this movement is its series-mounted double barrel, which helps to stabilise the distribution of energy and ensure its transmission to the regulator at a constant level. The movement features spectacular finishes, as required by Fleurier Quality certification: a 22-carat gold oscillating weight and the crossed "Côtes de Genève" decoration on the bridges complete the fine craftsmanship of the piece.

Encased in the **TORIC QUALITÉ FLEURIER**

The caliber PF333 is a self-winding mechanical movement. Its two series-coupled barrels ensure excellent rate regularity and a power reserve of 50 hours. An additional module governs the calendars: both the date and moon calendars. The caliber PF333 is decorated to the highest Haute Horlogerie standards, with superbly bevelled and circular-grained main plate and bridges, both featuring *Côtes de Genève* decoration. Its gold oscillating weight is delicately engraved and stamped with the initials PF.

Encased in the **TORIC QUANTIÈME PERPÉTUEL RÉTROGRADE**

The ultra-thin PF517 movement, comprising a platinum micro-rotor, bridges with côtes de Genève decoration, and flying tourbillon, was developed following in-depth studies by the Manufacture's master watchmakers. To keep the piece as slim as possible, the tourbillon was in fact integrated in the movement's main plate. The position of the tourbillon at 7 o'clock on the dial is a nod to the brand's founder, Michel Parmigiani, who was born at 7:08 am on December 2nd, 1950.

Encased in the **TORIC TOURBILLON**

“The beauty of the sky is a constant source of inspiration for me. I am always in awe of its colors and the way the light changes throughout the day. This is something that I try to capture in my watch designs, to create something that is both beautiful and timeless.”

Michel Parmigiani, Founder and Master Watchmaker.
